

BUILT ON MEZO · BITCOIN-BACKED AGENT COMMERCE

SuperPage

The x402 Payment Skill for the Agent Internet

Autonomous AI agents discover, preview, confirm, and pay for digital resources and physical products — settled in **MUSD**, the BTC-backed stablecoin, on Mezo's Bitcoin economic layer.

- Mezo
- MUSD
- x402 Protocol
- MCP
- A2A · AP2 · ERC-8004

The Problem

Agents Are Locked Out — and So Is Bitcoin

Agents can research, write, and plan — but they can't buy, sell, or move money.

Premium APIs, digital content, and e-commerce all sit behind human checkout flows. And the world's largest pool of digital capital — Bitcoin, ~\$1.5T market cap — has been agent-inaccessible because BTC isn't EVM-native.

WHAT AGENTS CAN DO	WHAT THEY CAN'T
Write code	Pay for cloud compute
Research products	Purchase products
Analyze markets	Hold or spend BTC
Plan trips	Book & pay for hotels
Compare prices	Complete checkout

The Solution

Bitcoin-Native Agent Commerce. Both Sides.

SuperPage is the agent-internet commerce layer where agents and humans coexist as buyers and sellers — settled in **MUSD**, Mezo's BTC-overcollateralized stablecoin, on a chain with ~1-second blocks and sub-cent BTC gas.

Same engine runs across **three surfaces**: Telegram (OpenClaw), Claude Desktop (MCP), and CLI — powered by `superpage-x402.js` .

Why Mezo

Bitcoin Is Where Capital Lives. Mezo Is Where Agents Spend It.

Mezo is the Bitcoin economic layer — EVM-compatible, ~1-second blocks, native BTC gas, and the home of **MUSD**, a BTC-overcollateralized stablecoin. It's the first chain where an autonomous agent can settle a sub-cent invoice and have that value backed by Bitcoin reserves.

PROPERTY	MEZO
Settlement asset	MUSD — BTC-overcollateralized
Native gas	BTC (18-dec EVM)
Block time	~1 second (Ignite consensus)
Chain ID	31611 testnet · 31612 mainnet
Liquidity reach	~\$1.5T BTC market cap

The Four Unlocks

- **Stable UX, Bitcoin-backed value** — agents quote in dollars; reserves live in BTC.
- **Sub-second settlement** — ~1s blocks beat L2 cadence; agent-rate commerce actually works.
- **Native BTC gas** — true Bitcoin settlement with EVM ergonomics; no bridge dance.
- **Aligned vision** — Mezo is the economic layer for human Bitcoin commerce. SuperPage is the agent layer on top.

Full-Stack Bitcoin-Native Agent Commerce

One Skill, Three Surfaces

Telegram

OpenClaw skill powering **@HeySuperioBot**. Agent previews price, asks user to confirm, pays on-chain, delivers content.

"Buy the Weather API"
→ *"It costs 0.50 MUSD. Proceed?"*
→ *"Yes"*
→ *Paid! Here's the data...*

Claude Desktop (MCP)

12 autonomous tools via Model Context Protocol. Claude can browse, pay, and access resources natively.

x402_list_resources

x402_preview / x402_request

x402_buy (Shopify)

x402_wallet / x402_send

CLI Agent

Multi-LLM standalone agent via Vercel AI SDK. Supports Anthropic, OpenAI, and Google models.

```
$ pnpm agent "buy weather API"

Found Weather API for 0.50 MUSD.
Confirm? yes
Paid 0.50 MUSD — tx: 0x9eab1d...
Here's the data: { temp: 72 }
```

HTTP 402 Payment Flow — Settled on Mezo

- 1

Agent Requests Resource

GET /x402/resource/weather-api
- 2

Server Returns 402

Payment requirements — MUSD amount, chainId 31611, recipient, 15-min expiry
- 3

Preview Mode (Stops Here)

Returns price to user — "Buy for 0.50 MUSD?"
- 4

User Confirms → Agent Pays

MUSD ERC-20 transfer on Mezo matsnet, ~1s confirmation
- 5

Retry with Proof → Content Delivered

X-PAYMENT header, on-chain verification via Mezo RPC, resource served

```
// 1. Request resource
GET /x402/resource/weather-api

// 2. Server responds: 402
{
  "scheme": "spay",
  "network": "mezo-testnet",
  "chainId": 31611,
  "token": "MUSD",
  "amount": "500000000000000000",
  "recipient": "0x..."
}

// 3. Agent transfers MUSD on Mezo
await sendMUSD(recipient, "0.50")
// tx: 0x9eab1d... (~1s confirmation)

// 4. Retry with payment proof
GET /x402/resource/weather-api
Headers: {
  "X-PAYMENT": "0x9eab1d..."
}

// 5. 200 OK — content delivered
{ "temperature": 72, ... }
```

Protocol Stack

Five Protocols, One Platform

SuperPage combines the five protocols that define the agent internet into a single Bitcoin-settled commerce stack.

AP2 Shopping Flow (Google Agent Payments Protocol)

Two-Sided AI-Native Marketplace

For Creators — Humans & AI

- **AI as Creator** — agents generate guides, datasets, templates and list them with a price
- Other agents and humans discover, pay, and access the content
- Connect Shopify store in 3 clicks — products auto-sync
- Creator dashboard with analytics and order management
- Set prices in MUSD — receive payments directly on-chain
- Fully autonomous creator economy — no human needed

Protocols

Shopify Integration

```
// Agent browses store products
browse-products {
  "storeId": "shopify/x402-store"
}

// Returns products with variants
[{
  "title": "Example T-Shirt",
  "price": "0.01 MUSD",
  "variantId": "gid://shopify/..."
}]

// Agent completes full checkout
buy {
  "storeId": "shopify/x402-store",
  "items": [{
    "productId": "gid://...",
    "quantity": 1
  }],
  "shippingAddress": { ... }
}

// → Order created + MUSD paid on Mezo
```

Resource Types

API — 0.01-1 MUSD

File — 0.50-50 MUSD

Article — 0.10-10 MUSD

Shopify — varies

Trust Built Into Every Layer

Spending Caps

MAX_AUTO_PAYMENT limits per-transaction spend.
Default 10 MUSD max.

Preview Before Pay

Agent always shows price and asks for user
confirmation before any payment.

Non-Custodial

Agent controls its own private key. No third party holds
funds.

On-Chain Verification

Every payment cryptographically verified against Mezo
RPC before content is served.

Time-Bounded

15-minute payment windows prevent stale or replayed
transactions.

Full Audit Trail

Tx hash, amount, timestamp, recipient — everything
logged and verifiable on Mezo Explorer.

```
// Every transaction receipt includes:
{
  "txHash":    "0x9eab1d...",
  "amount":    "0.50 MUSD",
  "to":        "0x5163...",
  "network":   "mezo-testnet",
  "chainId":   31611,
  "verified":  true,
  "timestamp": 1748259780
}
```

Monorepo Architecture

LAYER	STACK
Frontend	Next.js 16, React 19, Tailwind 4
Backend	Express, TypeScript, MongoDB
MCP Client	Node.js, viem, JSON-RPC
AI Agent	Vercel AI SDK (multi-LLM)
SDK	@super-x402/sdk (payment verification)
Blockchain	Mezo (EVM), viem, MUSD, ERC-8004
E-Commerce	Shopify Admin API
Identity	ERC-8004 (on Mezo)
Wallet	RainbowKit, wagmi
Agent Runtime	OpenClaw (Telegram gateway)

Live on Mezo matsnet

SuperPage isn't a slide — it's deployed. ERC-8004 identity / reputation / validation registries and a MockUSDC test token are live on Mezo Testnet (matsnet), wired into the SDK, backend, frontend, MCP client, and AI agent.

Deployed Contracts

CONTRACT	ADDRESS
IdentityRegistry	0x92b19730...09ebce
ReputationRegistry	0x6a81e89f...0e596f
ValidationRegistry	0x70d51baf...6243a1
MockUSDC	0xc2fa1cff...d503c
MUSD (native)	0x118917a4...3Ac503

All verifiable at explorer.test.mezo.org.

Network Details

PROPERTY	VALUE
Network	Mezo Testnet (matsnet)
Chain ID	31611 (0x7b7b)
Native gas	BTC (18 decimals)
Payment token	MUSD (18 dec, BTC-backed)
RPC	rpc.test.mezo.org
Faucet	faucet.test.mezo.org
Block time	~1 second (Ignite)
Mainnet ID	31612 (0x7b7c) — same configs apply

Switch to mainnet in one env var:

X402_CHAIN=mezo

Live Demo

See It In Action

Telegram (@HeySuperioBot)

- 1

"What resources are available?"

Lists all resources with names, descriptions, prices in MUSD
- 2

"Buy the Weather API"

Previews price → asks "Buy for 0.50 MUSD?" → waits for yes
- 3

"Yes"

Pays MUSD on Mezo → ~1s confirmation → delivers content → tx receipt
- 4

"Buy a t-shirt from the Shopify store"

Browses products → selects variant → full checkout with shipping

First Tx in 90 Seconds

1. Get test BTC	faucet.test.mezo.org
2. Mint MockUSDC (open mint)	or borrow MUSD against BTC
3. Buy a resource	Telegram / Claude / CLI
4. Receipt verified	explorer.test.mezo.org
